

**Nansemond Parkway Odor Update of July 30, 2010:**

**At it's regular Board meeting on Wednesday, July 28, 2010 the SPSA Board of Directors approved a Letter Agreement with Suffolk Energy Partners which is the Company that manages the methane gas collection system at the Regional Landfill.**

**The Letter Agreement provides for the immediate commencement of the process to install the vertical methane gas well collection system in Cell VI at the Landfill. The estimated completion of the construction is October 1, 2010.**

**With the completion of this process a complete gas well system will be in place to collect the gas that develops when waste degenerates. Since no additional putrescible waste is being placed in the landfill currently, the landfill should have no additional issues with odors emanating from residential and commercial waste.**

**SPSA continues to accept construction and demolition debris and is covering the material on a daily bases. The odor management plan approved by DEQ is be followed and monitored regularly.**
